

ENGINEERING THE EVOLUTION OF WORKSPACES

The Indaba Hut serves as a secluded seating arrangement, ideal for canteens or impromptu break away spaces. It provides both visual and auditory isolation, allowing users to enjoy some privacy.

Additionally, it can be equipped with power outlets for charging electronic devices, making it a versatile choice. With seating for 2-4 individuals, it also fosters collaboration, making it a multifunctional piece furniture piece.

INTRODUCTION

W E A R E C . O D E S I G N S

With more employees returning to the office, open-plan settings have become common. However, concentrating on individual tasks is challenging due to constant distractions in this layout.

The prevalence of audio-visual, Zoom, and Teams calls further disrupts colleagues in the vicinity. Additionally, many conversations require privacy, making it difficult in an open-plan environment.

Therefore, there is a growing demand for spaces with enhanced sound insulation and visually demarcated areas that signal a need for uninterrupted focus.
